

# PHYSICAL SECURITY ATMs

By installing outdoor ATMs (automatic teller machines/cash points), banks and financial institutions have increased their services and are able to provide solutions to their clients' needs in a safe and efficient manner. ATMs have various base models, such as NCR, Wincor-Nixdorf, Fujitsu and Papelaco. These ATMs are located in armoured cabinets made using top-quality materials and in accordance with the legislation on private security.

The cabinet is manufactured using a 3 mm-thick steel sheet for the perimeter which is protected with a layer of Epoxy priming to provide the protection necessary to support all weather conditions.

The access door is also manufactured using a sheet of steel and with security locking. The result is a level of resistance to manual impact type B according to Spanish Standard UNE EN 108-131.

## Configuration

- Ceiling protected with perimeter weathering.
- Anti-rust treatment.
- 3 mm steel plate.
- Stainless steel tray, mate and polished finish (Optional).
- Thermal and acoustic insulation, rock wool type.
- Lacquered wood finish.
- Interior with a fluorescent light fitting.
- Table or tray for documents.
- Opening and intrusion detection system (Optional).
- Connected to alarm centre.
- Exterior awning for focused illumination.
- Banner supplied by client and perimeter sign writing with corporate image.
- Air conditioning equipment installation (Optional).
