

PHYSICAL SECURITY Strong Rooms

Through its strong rooms for safeguarding cash and safe-deposit boxes to rent, TecnoVe Security offers maximum security against the most sophisticated methods of attack. The strong rooms are constructed with armoured walls, ceilings and floors with access to the inside through an armoured door and emergency auxiliary door, as stipulated by current legislation.

The strong room panels are comprised of steel sheets on the inside and outside in the form of a sandwich and reinforced on the inside by a highly resistant steel structure which is manufactured specially for this type of product. A material made of compact cement base forms the “sandwich filling” which is joined using metal staples. The result is a highly resistant strong room as proven by the test results conducted by LGAI Laboratories (General Laboratories for Experimentation and Research).

Interior panels are fixed using bead-on-plate welding or screws which allow for future extensions to be conducted with relative ease.

Due to their design, they can be installed in places with difficult access or transported elsewhere. Furthermore, a wide range of finishes and security options are offered to solve individual clients' particular requirements.

Panel Class	Thickness
Clase IV	65 mm
Clase VII	100/150 mm
Clase X	150 mm

Configuration

- Manufacture of independent panels.
- Embedded panels.
- Can be extended.
- Can be moved to another location.
- Size according to requirements.
- Quick and safe mounting.
- Strong room adapted to the location.
- Adjustment possible during mounting.
- Welded panels and final finishes.
- Mounting of armour-plated door, emergency auxiliary door and grilles.
- Surface finishes and paint.
- Interior finishes according to clients' needs.
