

ENVIRONMENT Bundling machine for use in forests

As a response to the need to collect and remove remains of branches in wooded areas and surplus materials from the agriforestry industry, in addition to use and make the most of this organic material by recycling, TecnoVe Security's offers its bundling machine that continuously bales biomass through compression.

The bundling machine is an autonomous vehicle which can be used to access work areas and is manoeuvred by a single operator. It is basically comprised of a steel chassis on which the different components are assembled.

Configuration

- Hydraulic press.
- Hopper.
- Tying system.
- Crane.
- Control cab.
- Component area.
- Engine to enable displacements.
- Maximum working speed 5 km/h.
- Maximum movement speed 22 km/h.
