

MOBILE SECURITY Cash in Transit

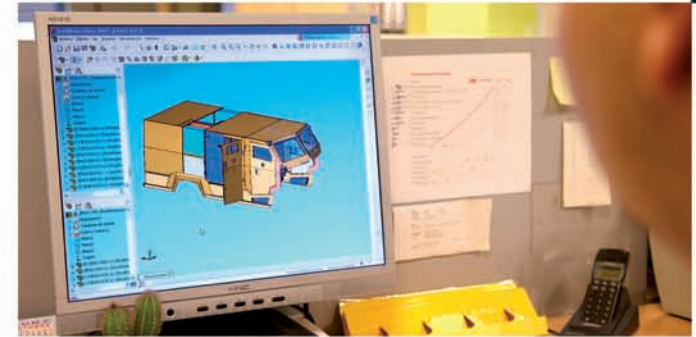

The trucks used to transport money are the ideal solution for companies, as their configuration can be adapted to any type of base chassis: light, medium and heavyweight transport vehicles, with loads that range from 500 Kg to eight tonnes.

The vehicles are divided into three clearly differentiated areas: the driver's area, the security guards' area and the loading area which can be armoured to varying degrees as required. The storage capacity of the vehicles also varies, depending on the weight of the merchandise to be transported.

The transformations of these vehicles fulfil and exceed all national and international legal requirements in terms of armour-plating and electronic security systems.

Tecnove Security offers advice to clients, thus providing the best solution possible for the type of vehicle, load, armour-plating and security devices.

Clients can see the end result of the vehicle before it is manufactured with our 3D computer-aided design and manufacture systems.

Configuration

- Smoke and toxic gas extractors.
- Interior security locks on doors.
- Battery disconnect switch.
- Spy mirrors.
- Security chest in the loading area.
- Collection hoist.
- Exhaust pipe protection.
- Fire detection system.
- Vehicle sign writing.
- Heater with thermostat in security guard area.
- Intercom between different areas in the vehicle.
- Air conditioning with double evaporator.
- Porthole to shoot through.
- Front fender.
- Foldaway seats and benches.
- Anti-puncture system.
- Shelves in the loading area.
- Auxiliary tables.
- GPS locator.
- Emergency locator.
- Programmable electronic switchboard.
- Communication modem.
- Audio-Video recorders.
- Interior-exterior cameras.
- Touch screen navigator.
- Accident recorder.
- Frequency inhibitors.
- Interference shield.
- Acoustic proximity alarms.
